

THE SWAMPER XXXXXX

Its name is the Swamper. It makes me think of swamps. It has four purple wings and a long brown snout. Its skin is waterproof and it has huge fins.

Don't forget its gigantic height! It is really impressive. It lives in the swamps along the Amazon river. It is frugivorous because it only eats fruit. It can paralyze and hypnotize its prey. The Swamper is extremely aggressive and dangerous. It is bigger than the Aeromantula and it is stronger than the Thunderbird.
