

# 2050 ?

## Ecological and over population dangers in cities of 2050

### ▼ Natural disasters

Pollution will cause polar ice-cap melting and rising sea level. Soil waterproofing caused by urban expansion and the use of concrete will increase flooding.

### ▲ Overpopulation is a problem

The world population will increase more than 10 % between 2013 and 2100. In 2050, 7 inhabitants out of 10 will be cities dwellers. There will be problems such as traffic jams, air pollution, unemployment, segregation and poverty.
